

Whitepaper Portfolio Brief

Architecture, deployment, and diligence reference

Gateway Corporate whitepapers are built for technical operators who need deployment clarity under real constraints. Each paper emphasizes system behavior, risk surfaces, and implementation implications over abstract positioning.

Library Matrix

Document	Best Fit	Core Technical Scope
Devicer NEXT Whitepaper	Browser changes and exact document duplicates	Engineering preview: versioned observations, explainable comparisons, calibration, retrieval, and governance
HyperLocal 2 Whitepaper	Messaging and CRM operators	Routed SMS operations, permissioned automations, and governed conversational workflows
Gateway Corporate One-Page Brief	Executive and architecture screening	Condensed product/service alignment for rapid technical-commercial review

Suggested Review Sequence

1. GCS One-Page Brief for context and stakeholder alignment.
2. Devicer NEXT for comparison evidence, explicit uncertainty, and preview release scope.
3. HyperLocal 2 for communication workflow governance.

Action Path

After review, route architecture-fit questions through gatewaycorporate.org/contact to map paper findings to your production environment.

One Devicer license includes all premium Devicer plugins and features forever, including those not yet developed, as they are released. The core remains open source. Confirm deployment, third-party services, and other product licensing separately.
